Dancing Groot!

VIRTUAL 3D ROBOT DANCE

I was inspired by the Guardians of the galaxy Vol.2 opening scene, dancing baby groot.

When I made my work, I tried to express the innocence, purity, and adorable of Groot, who danced while listening to music even during the war.

I realistically represent the real person's walking posture, body shake and tilt, movement, and joints.

Groot dances when it's not walking.

There are four types of dances, and he doesn't move according to the rules, but even when he does the same type of dance, he shows a different choreography.

KEYMAP

Instead of just dancing and walking around in a programmed scenario, users can directly control Groot's movements, light, and camera to interact.

WALKING MODE
+ 4 DANCING MODES!
